

My name is Yunchao Zhang, and I am now a third-year undergraduate at Zhejiang University, majoring in Computer Science and Technology. I'm expecting if you can take me as a self-funded summer research intern this year, 2022.

Here is my homepage for a quick introduction: <https://yunchaozhang.netlify.app>.

Basically, I have good academic record at university. I'm a self-motivated person and always keep improving myself. I did bad in my first year at school and got 3.6/5.0, but I soon adjusted myself and got 4.5/5.0 GPA last term, winning the scholarship.

Previously, I pushed myself into the AI lab at Zhejiang University and did research under the guidance of [Prof. Yang](#) since I was a sophomore. I have been in charge of the NLP part which includes the contrastive learning in a recommender system and improve the baseline by 8%. Our paper has been submitted to WWW'2022(reject) and SIGIR'2022 (I am the third author).

Recently, I joined and became a core member of Queshi Technology, which proposed a clinically real and available intelligent decision-making system for precise drug use based on patient genome panoramic information and artificial intelligence algorithm model. I am now in charge of the model construction to predict the appropriate medicine from gene sequencing. We are now participating the competition China College Students' 'Internet+' Innovation and Entrepreneurship Competition.

I am curious about the knowledge of ML. Also, I'm looking forward to seeking your guidance if accepted into the Ph.D. program. So, please let me know what you think about me visiting your lab as a self-funded summer intern this year, as well as your concern.

Look forward to your reply! Thank you.
